Education

B.Tech in Computer Science and Engineering

Engineering College West Bengal

Class XII: 71% **Class X: 86.7%**

2024 – 2028

CGPA: 8.13/10

Technical Skills

Languages: C++, Python, JavaScript

Backend: Node.js, Express.js, REST APIs, Authentication, OTP, OAuth, Nodemailer/SMTP, API Integration, API Rate Limiting

Databases: MongoDB, Mongoose; SQL (Currently Learning)

Frontend: HTML, CSS, JavaScript, GSAP

Tools: Git, GitHub, Canva, DaVinci Resolve

Projects

Consistency Daily

Live — GitHub

Full-Stack Productivity & Habit Tracking Platform

- Built a full-stack productivity platform with an **offline-first architecture**, allowing core functionality without an active internet connection.
- Implemented **IndexedDB-based local storage and synchronization** to maintain user data across offline and online states.
- Developed squad accountability, distraction blocking, LeetCode integration, and **Groq-powered AI coaching**.
- Implemented authentication, backend security mechanisms, API validation, and **API rate limiting**.
- Added **APK/mobile support** and designed the system for reliable cross-platform usage.
- Reached **30+ lifetime users** through real-world usage and continuous development.

Tech: JavaScript, Node.js, Express.js, MongoDB, Mongoose, IndexedDB, Groq API

Eventix

Live — GitHub

Full-Stack Event Management & Automated Ticketing Platform

- Developed a centralized platform for colleges and universities to simplify event creation, registration, and ticketing.
- Built **multi-role portals** supporting different users and event-management workflows.
- Implemented team registrations and automated **PDF e-tickets with QR codes**.
- Developed **real-time attendance verification** using QR-based ticket validation.
- Enabled college clubs and societies to manage events through a centralized platform.

Tech: JavaScript, Node.js, Express.js, MongoDB, Mongoose, HTML, CSS

Anya – Voice AI Companion

Live — GitHub

Voice-Native AI Companion

- Built a voice-native AI companion using **Node.js, MongoDB, and Vanilla JavaScript** for conversational interaction.
- Implemented persistent memory using **local 384-dimensional vector embeddings** and episodic event logs.
- Added adaptive personality tracking to maintain context and personalize future interactions.

Tech: JavaScript, Node.js, Express.js, MongoDB

Achievements

3rd Place – CODE@FROST Hackathon

36-Hour Hackathon

- Secured **3rd position** with a four-member team and received the **Best Buddy Award** for teamwork and collaboration.
- Built a **Hyperlocal Skill Exchange Platform** under the Glacier Commerce – FinTech & E-Commerce track.
- Implemented location-based service discovery within a 5–10 km radius, bidding, reputation scoring, and provider-customer interaction workflows.

Overclocked – Development Society AEC

- Participated in an offline hackathon and collaboratively developed **Eventix**, a centralized event-management platform for college clubs and societies.
